

Class Activity Two Information

Team Members: Phillip Ramirez, Usman Tahir

Roles:

- Phillip: Assist with the logic behind the method to be implemented; Assist in the debugging process
- Usman: Assist with the logic and variable naming / usage methodology; Assist with the upkeep of the git repository to track code changes

Other Notes:

- We removed the package details at the top of the page, since I (Usman) was using Visual Studio Code and there were some conflicts with CLI compiling
- We tracked changes in our public git repository for this assignment, and Phillip and I are the SOLE authors of the codebase and associated logic
- We created relative paths for the .txt files to load in, so that we could make a directory for our git repository. If you run the code as is (*javac VotingApplication*), the program will run and display the correct output
